

IT Security Seminar 10

Student version

Prof. Leonardo Mostarda,
School Science and Technology,
Camerino University, London
Version 2.0, Mar 2015

Question 1

Briefly discuss how Secure Socket layer (SSL) deals with the threats that man-in-the-middle attack and SYN flooding pose to web security.

Question 2

One of the main goals of Secure Socket layer (SSL) is to ensure credit card numbers can be safely transferred via the Internet for online shoppers. Using the Internet stack as your reference model, explain how SSL can provide server and client authentication, data confidentiality and data integrity.

Question 3

Explain how you can establish Man in the Middle attack to compromise Secure Socket Layer protocol (SSL) and how SSL would respond to such an attack. Discuss the probability that the attack will ever be successful.
